

THE HOTTEST THING IN ELEVATOR POWER UNITS ISN'T HOT AT ALL...

In Fact It's Cool, And Built To Stay That Way.

The new LTPA power unit from Leistriz isn't submerged, and it's not belt-driven. But it combines the best of both.

It's motor is mounted above the tank, allowing heat to dissipate in the air rather than in the oil. This keeps temperatures cooler for smoother elevator rides, superior parts protection, and reduced oil smell.

It's pump is fully submerged, and emits low noise. With no seals to replace and no belts to adjust, the LTPA is virtually maintenance free. And with access through the top, all components can be easily accessed without emptying the tank.

And more. The LTPA is compact, and perfect for both new installations and modernization. The LTPA from Leistriz – call for complete information.

LTPA Power Units

Oil Flow	<280 GPM
Working Pressure	<750 PSI
Motor Power	≤ 75 Hp
Motor Duty	≤120 starts/hour
